

WORKING DRAFT | INTERNAL REVIEW

The AI and Automation Opportunity Study

How we describe the service, what a seller walks in with, and why clients choose Techjays.

Techjays

A six to eight week study that turns “we know AI matters” into a costed, prioritized roadmap.

Fixed fee. We map how the business actually runs, identify where process re-engineering, automation, and AI can grow revenue per employee, and deliver a stack-ranked plan that can be executed immediately, in-house or with us.

1

Most companies are stuck between AI pilots and real impact. The stall is organizational, not technological.

2

We study the business the way engineers do: process by process, quantifying where the leverage is.

3

Leadership gets a prioritized plan with numbers they can defend to their board, in six to eight weeks.

Re-engineer first. Automate next. AI where it changes the economics.

Every process goes through the same three layers, in order, and every opportunity comes out costed, plotted on return vs effort, and stack-ranked.

Layer 1, Re-engineer:

simplify the process before any technology is added.

Layer 2, Automate:

rules, integrations, and workflow automation where certainty is enough.

Layer 3, Apply AI:

including agents, where judgment, language, and 24/7 operation genuinely pay.

Output, Prioritize:

every opportunity costed and stack-ranked on return vs effort.

What it is

- A quantified operating plan
- A scored assessment and an opportunity portfolio on a return vs effort matrix
- A sequenced roadmap with a concrete first 90 days

What it is not

- A strategy deck
- A technology audit
- A staffing pitch

What the seller walks in with.

The offer card

Six to eight weeks, fixed fee.

Deliverables by name: readiness scorecard, opportunity portfolio on the return vs effort matrix, initiative outlines with build / buy / partner options, first-90-days plan, executive readout.

The sample report

An assessment report built from real Techjays engagements; actual process maps, target designs, and roadmaps with client identifiers removed.

Answers the “show me what I get” buyer.

Next collateral investment.

The qualification profile

Mid-market, roughly 100 to 500 employees.

Operations- or GTM-heavy. Board or CEO pressure on AI.

Pilots that have not moved the P&L.

Three questions that open the door. Four answers that keep it open.

1. What did your last AI pilot change in the P&L?
2. If your team doubled tomorrow at the same cost, where would you point it?
3. Who in your company can draw how a customer order actually flows, end to end?

The objection	Our answer
“Why not a big firm?”	Same study, a fraction of the fee, and a plan you can build rather than a strategy deck.
“You will just tell us to hire you.”	Fixed fee independent of any build decision. Every recommendation carries build / buy / partner options. The client owns everything.
“Our data is not ready.”	Data readiness is one of the things the study assesses. It is not an entry ticket.
“We can do this in-house.”	Individual productivity, yes. Department-level re-architecture needs dedicated structure from outside the daily grind.

Three reasons, each one verifiable.

We build what we recommend

01

Estimates come from people who design and deliver these systems every week, so the plan is buildable, not theoretical.

Because we can be asked to execute it, we live with our own advice: an incentive no pure-strategy firm has.

Engineering depth at a mid-market price

02

A comparable study from the big firms runs several times our fee and stops at strategy altitude.

We work at workflow level: the actual steps, handoffs, and systems, where the value hides.

Independence by design

03

Fixed fee, no obligation to build with us, build / buy / partner options on every recommendation, and the client owns every artifact.

If the right answer is their in-house team, the report says so.

Proof today: delivery heritage across AI and data programs, including a three-week logistics process redesigned to run in three to four days. The first pilot's case study slots in here.

The path forward

“A study priced so the decision is easy, scoped so the plan is buildable, and honest enough that clients trust the answer.”

Now

Feedback on the framing; the one-liner, the objection answers, the qualification profile.

Next

Build the anonymized sample report from real engagements, the proof artifact every conversation needs.

Then

Put it in front of the first prospect conversations and refine from what the market says back.
